Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/811,633	PATTERSON, JAMES C.	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 29 March 2004.
 2a) This action is **FINAL**. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-18 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-18 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on 29 March 2004 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-12, and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Becerra et al (US 6,907,280 B2). Becerra et al disclose a method of producing an index of brain functionality using PET and other image data to show regional differences in brain activity, normalizing intensity data and filtering normalized data and locating regional extrema wherein activity rates are higher/lower than others (Col 4 Line 15-40, Col 23 Line 15-Col 24 Line 33). Finally Becerra et al use Talairach space, transformations to Talairach space, smoothing functions and group comparisons both within different regions of the same brain, different times of the same region, and different statistical norms for regions of the brain (Col 23 Line 15-Col 24 Line 15). Normalized data can be normalized across subjects or within a subject to obtain a normal distribution of activity (Col 38 Line 1-Col 40 Line 25). These methods allow for the creation of volumes of interest within the brain for statistical and empirical analysis, including the calculation of mean intensity values within a region and the generation of parametric maps which can be used to show relative brain activity in regions compared

Art Unit: 3737

to other regions and other subjects (Col 16 Line 8-Col 17 line 35, Col 8 Line 25-65, Col 28 Line 1-Col 34 Line 40, Claim 24). These values are indications of significance of activity rates within specific regions of the brain, and are compared to standard measures to find statistical significance of the data (Col 23 Line 35-Col 24 Line 50).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Becerra et al (US 6,908,280 B2). Becerra et al disclose all that is listed above but do not mention a specific smoothing function, does not mention the division of data into four volumes of interest with increased metabolism activity and nine volumes with decreased metabolism, and therein does not specifically suggest normalizing the data set of increased metabolism by dividing the intensity values of the first set of volumes by a mean value of intensity of a second set of volumes of interest which have decreased metabolism, or diving the intensity values of each of a set of volumes with increased metabolic activity divided by the mean value of the intensities of volumes of interest with increased metabolic activity. While those specific mentions of statistical analysis are not mentioned, Becerra et al do mention using mean intensity values for different statistical subsets and diving other subsets by intensity values elsewhere and from previous scans to help with data normalization and statistically significance amongst

Art Unit: 3737

data acquired. Becerra et al describe the use of volumetric analysis of volumes of interest by normalizing the intensity for the region, which is retained in Talairach space, and then levels of activity all across both regions of interest and regions which were not selected a priori for analysis but end up as statistically significant (Col 23 Line 15-Col 24 Line 15; Col 31 Line 11-55), statistical intensity values of volumes of interest are normalized, set to standards over a number of subjects, regions, and times (Col 28 Line 1-40, Col 30 Line 58 – Col 31 Line 11, Col 33 Line 26-Col 34 Line 40, Claims 8-16). Smoothing functions are used to correct for motion variance within data collected (Col 27 Line 58-Col 28 Line 48). Becerra et al do not disclose the use of analysis with regard to a particular disease, but measure with respect to pain, and to find a link between psychiatric disease (Col 8 Line 65-Col 9 Line 30, Claim 7) and brain activity. While not using the same specific techniques for statistical analysis, the methods provided by Becerra et al provide the basis for optimization of parameters and data values for incorporation into a diagnostic treatment and the optimization of parameters which would be well-known in the art, therefore it would have been obvious to one of ordinary skill in the art to have used the processing and statistical analysis of Becerra et al to provide a number of regions (they use 10) for statistical analysis and normalization *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Conclusion

Art Unit: 3737

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joel M. Lamprecht whose telephone number is (571) 272-3250. The examiner can normally be reached on Monday-Friday 7:30AM-4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian L. Casler can be reached on (571)272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
